DOORKING ADD-ON PROPOSAL

90-DAY PILOT PROPOSAL

MAKE THE DOORKING GATE SMARTER WITHOUT REPLACING THE BOX.

Angel Gates runs beside the existing metal DoorKing call box as a premium add-on asset: visitor passes, faster entry, timestamps, camera evidence, and property-manager incident delivery.

STAYS

DoorKing remains the foundation.

ADDS

QR/PIN passes using existing camera evidence.

DELIVERS

Timestamped incident emails.

THE SIMPLE PITCH

A cleaner gate experience with better accountability.

The current DoorKing setup remains in place. Angel Gates is a value-add asset beside it, giving residents and managers a modern way to send time-limited QR/PIN passes to guests, deliveries, cleaners, vendors, contractors, and family.

The point is faster gate flow on normal days and better evidence on bad days. When something goes wrong, the property gets a timestamped event that can be matched to camera footage and delivered to the property manager for review.

CURRENT PAIN

The old metal box stays, but it should not be the only visitor workflow.

01

Loud failed-code lines

Guests mistype codes, the keypad beeps, and the lane backs up while everyone waits.

02

Shared code abuse

Permanent gate codes spread because short-term access is not easy enough.

03

Manual incident review

Managers have video in one place, access context somewhere else, and no clean timeline.

04

Unauthorized entry attempts

One vehicle can try to sneak in behind another, leaving the manager to hunt through video later.

05

Weak chargeback evidence

Gate-arm damage becomes a property expense when the responsible event is hard to prove.

SITE WALK PHOTOS

Show the existing camera, then show where Angel Gates fits.

EXISTING DOORKING BOX

Current access point

Metal call box, keypad, directory, and visitor friction.

GATE LANE AND ARM

Incident area

Where vehicles stop, where the arm gets hit, and where timing matters.

CAMERA / NVR VIEW

Evidence source

The camera angle Angel Gates can tie to timestamps and alerts.

ANGEL GATES READER LOCATION

Add-on location

Where the QR/PIN reader can sit beside the current DoorKing workflow.

WHY THEY WANT IT

Benefits by audience

RESIDENTS

Send a pass before the visitor arrives.

Cleaner access without handing out a permanent gate code.

RESIDENT VALUE

- Temporary QR or PIN access for guests, family, cleaners, deliveries, and vendors.
- Start and expiration times instead of permanent shared codes.
- Less office calling for simple access needs.

VISITORS

Use the approved pass, not the old keypad routine.

Fewer stuck cars and faster movement through the lane.

VISITOR VALUE

- No directory searching or waiting for a resident to answer the call box.
- Cleaner arrival for delivery drivers, contractors, and family.
- Less time sitting in a backed-up line at the gate.
- Expired or wrong passes are denied and logged.

MANAGERS

Know who, when, and why.

Pass control, denied attempts, and incident context in one place.

MANAGER VALUE

- Issue, suspend, and expire resident, visitor, and vendor passes.
- Review denied attempts, expired passes, and suspicious access windows.
- Email incident records for damage, unauthorized entry attempts, wrong-code attempts, and camera review.

OWNERSHIP

Pilot value before rollout.

Better access and evidence without replacing DoorKing.

OWNERSHIP VALUE

- Improve resident experience without replacing DoorKing.
- Create evidence for gate damage, vendor disputes, and chargebacks.
- Measure one gate before expanding to more properties.

VISITOR PASS FLOW

Six steps from pass to proof

1

Create

Resident or manager creates a pass for a guest, vendor, delivery, or contractor.

2

Limit

The pass gets a gate, sponsor, start time, expiration time, and QR/PIN credential.

3

Send

The visitor receives the pass before arriving at the gate.

4

Scan

The visitor scans QR or enters PIN at the Angel Gates reader.

5

Open

Angel Gates validates locally, logs the event, and sends the open command.

6

Review

If there is an incident, the manager can match pass, sponsor, time, and camera footage.

INCIDENT EMAIL

Every incident becomes a timestamped manager email.

Angel Gates can use the property's existing camera or NVR if it provides an approved stream, snapshot, or clip export. If the existing camera already sees the gate arm and vehicle area, Angel Gates can use that as the evidence source. The system packages the time, gate event, credential, sponsor, vehicle/tag reference, and camera clip into a manager-ready review email for damage, possible unauthorized entry, denied access, or other incidents.

INSTALL SHAPE

A jewel asset beside DoorKing, not a replacement.

DoorKing stays

The existing metal box, keypad, gate operator, free-exit behavior, and safety devices remain the foundation.

Angel Gates adds

A premium access-and-evidence asset: edge controller, QR/PIN reader, local event log, camera evidence links, and manager email workflow.

Installer boundary

A qualified gate/access installer connects the add-on path without modifying safety equipment.

PILOT SCOPE

90 days, one gate, measurable value.

- Existing DoorKing setup remains in place.
- QR/PIN access for selected residents, visitors, vendors, and managers.
- Faster visitor flow compared with the old call-box/keypad routine.
- Existing camera/NVR used as the evidence source if accessible.
- Incident email alerts for gate damage, possible unauthorized entry, and denied access.
- No DoorKing replacement and no gate safety modification.

\$279/month

Example for one gate and 270 units.

HARDWARE KIT

\$499 one-time

INSTALL/SETUP

\$350 one-time

SERVICE

\$79/gate + \$0.75/unit

NEXT STEP

Walk the gate and confirm the details.

- DoorKing model and lane layout.
- Camera/NVR brand and clip access method.
- Property manager email for alerts.
- Recent gate-arm service history.
- Installer contact or preferred gate vendor.
- Approval path for the 90-day pilot.
